Industry : Healthcare Sector
Location : Lidcombe, New South Wales

Stakeholders:	
Architect & Interior	: DEM
Lighting Designer	: LCI Consultants
Contractor	: Grindley Construction
Electrical Contractor	: David Power
Client	: MS Plus

BACKGROUND

MS Wellbeing Center is a facility designed to support individuals with multiple sclerosis and other neurological conditions. The design prioritises comfort and a welcoming atmosphere, expressed through the use of timber finishes and curved edges. The Swerve 76 profile was chosen for its ability to combine high performance output and radius curves in one solution, complementing the centres design intent. With its durable construction and ability to follow complex outlines, Swerve maintains a sleek, clean aesthetic that showcases the product's full potential.

OUR SOLUTION

We selected the Swerve 76 profile for its smooth curved angles and warm 3000K CCT, creating an inviting and comforting ambiance from the moment visitors enter the space. Spanning over 70 metres in total length, Swerve is installed across multiple areas to provide both functional highlights and directional lighting—particularly in the reception, welcome lounge, and circulation spaces such as staircases. Its seamless joints and zero light leakage make it ideal for defining stand-alone zones with continuous lines, supporting a calm and aesthetically pleasing environment that promotes comfort and helps reduce anxiety for individuals with MS and their families.

Additionally, Swerve was used to address design challenges—most notably in the welcome lounge, where the trapezium-shaped layout, rather than a typical square, demonstrated the system's flexibility and design adaptability.
